Dominik Szombathy
Theoretical modeling of the collective
tunneling of a Wigner necklace
October 25, 2022

Contents

1 Path Integral Formalism (introduction) 1

2 Wigner Crystals 1

3 Instanton Formalism 1
3.1 Free Particle . . . 1
3.2 Harmonic Oscillator . . . 1
3.3 One particle tunneling . . . 1
3.3.1 One Particle Hamiltonian . . . 1
3.3.2 Action Integral Calculation . . . 1
3.3.3 Tunneling calculation in quartic potentials . . . 1

4 Experimental Considerations 1
4.1 Modeling the Potential and Fitting . . . 1
4.2 Polarization data . . . 1
4.3 Scaling . . . 1

5 Many Body Tunneling Calculations - Instanton 1
5.1 Quartic Hamiltonian model . . . 1
5.1.1 Rescaling and Dimensionless Hamiltonian . . . 1
5.2 Milnikov method . . . 1
5.3 Classical Equilibrium Positions . . . 1
5.4 Harmonic Oscillator Eigenfrequencies adn Eigenmodes . . . 1
5.5 Trajectory Calculation . . . 1
5.6 Arc Lengt Paramterization . . . 1
5.7 Egzact Diagonalization (ED) . . . 1

6 Polarization 1
6.1 Classical Polarization Calculation . . . 1
6.2 Polarization using ED . . . 1

A Mathematics 1
A.1 Gaussian Integrals . . . 1
A.2 Besel Problem . . . 1

B Algorithms and Methods 1
B.1 Monte Carlo and Simulated Annealing . . . 1
B.2 Minimalization by Nelder-Mead algorithm . . . 1

1 Path Integral Formalism (introduction)

2 Wigner Crystals

3 Instanton Formalism

3.1 Free Particle

3.2 Harmonic Oscillator

3.3 One particle tunneling

3.3.1 One Particle Hamiltonian

3.3.2 Action Integral Calculation

3.3.3 Tunneling calculation in quartic potentials

4 Experimental Considerations

4.1 Modeling the Potential and Fitting

4.2 Polarization data

4.3 Scaling

5 Many Body Tunneling Calculations - Instanton

5.1 Quartic Hamiltonian model

5.1.1 Rescaling and Dimensionless Hamiltonian

5.2 Milnikov method

5.3 Classical Equilibrium Positions

5.4 Harmonic Oscillator Eigenfrequencies adn Eigenmodes

5.5 Trajectory Calculation

5.6 Arc Lengt Paramterization

5.7 Egzact Diagonalization (ED)

6 Polarization

6.1 Classical Polarization Calculation

6.2 Polarization using ED

A Mathematics

A.1 Gaussian Integrals

A.2 Besel Problem

B Algorithms and Methods

B.1 Monte Carlo and Simulated Annealing

B.2 Minimalization by Nelder-Mead algorithm
